

Introduction to Website Development

COURSE OUTLINE

Course Description

This beginner-friendly course introduces students to the core technologies behind websites—HTML, CSS, JavaScript, and media integration. Through hands-on projects, students will gain practical experience in building a simple, functional webpage entirely from scratch.

- 01 Introduction & Setup**
 - Overview of web development and how the internet works
 - Tools of the trade: text editors, browsers, developer tools
 - Setting up a project folder and basic workflow
- 02 HTML – The Structure of the Web**
 - Understanding the role of HTML
 - Common tags: headings, paragraphs, lists, links, etc
 - Hands-on: Creating a simple webpage
- 03 CSS – Styling and Layout**
 - Introduction to CSS: inline, internal, external
 - Selectors, properties, and values
 - Colors, fonts, backgrounds, and borders
 - Layout basics: margins, padding, and positioning
 - Hands-on: Styling the simple webpage
- 04 Media - Images and Videos**
 - Adding and formatting images
 - Embedding videos and audio
 - Hands-on: Adding media to the webpage

05

JavaScript – Adding Interactivity

- What JavaScript is and how it works
- Variables, functions, and basic events
- Hands-on: Adding JavaScript to a webpage

06

Bringing It All Together – Simple Project

- Planning and structuring a website
- Development environments and version control
- Deployment to a server
- Hands-on: Develop a simple multi-page website and deploy to server
